EDUCATION

City University of New York – Brooklyn College

Brooklyn, NY

Bachelor of Science in Computer Science, Minor in Data Science

Expected May 2027

- Coursework: Data Structures, Algorithms, Database Systems, Advanced OOP, System Design, Data Science, Operating Systems, Intro to Software Engineering, Multimedia Database, Machine Learning.

EXPERIENCE

Mira Intel

New York, NY

Software Engineer Intern

February 2026 – Present

- Built a customer-facing inspection dashboard visualizing drone CV model outputs including defect classifications, structural risk scores, and damage trends across 5+ infrastructure organizations including NYC Coastal Authority.
- Developed a FastAPI and ReportLab report generator exporting structured multi-page PDF inspection reports in under 1 second, replacing manual reporting workflows.

COI Energy

New York, NY

Data Engineer Intern

October 2025 – December 2025

- Engineered a Python ETL pipeline processing over 4.3 million energy records with anomaly detection and missing-data interpolation, achieving 98% data quality for downstream ML predictive and optimization models.
- Created a Docker-based BigQuery emulator environment for testing, reducing ETL development cycle time by 40%.

Soaper LLC

Seattle, WA (Remote)

Software Engineer Intern

July 2025 – October 2025

- Rebuilt the patient and physician portal scheduling system using TypeScript, React, and Tailwind with phone/email appointment verification and automated reminders, improving page load performance by 45%.
- Built FastAPI endpoints and restructured PostgreSQL schemas across all portals, reducing query latency by 30%.

Unadat

New York, NY

Software Engineer Intern

July 2025 – August 2025

- Led a team of 8 interns as PM and SWE to revamp platform modules for 1,000+ users in an 8-week sprint.
- Developed an AI document summarizer integrating a LLM API with backend processing, caching, storage, and frontend delivery, cutting manual review time by 60% across 800+ documents.

Brooklyn College CS Club

New York, NY

Software Developer

October 2024 – May 2025

- Optimized club website performance using TypeScript, Next.js, and Tailwind, improving page load speed by 35%.
- Streamlined deployment pipeline with Docker and GitHub Actions, reducing deployment time by 40%.

PROJECTS

Parallax | *TypeScript, React, Tailwind, D3.js, FastAPI, MongoDB, Docker, scikit-learn, TensorFlow, Stripe, NGINX* [github](#)

- Built a life/career simulation platform (React, FastAPI, MongoDB) that models user decisions and generates personalized 10-year salary trajectories, career milestones, and analysis with side-by-side path comparisons.
- Implemented a hybrid ML/AI system combining XGBoost predictions with LLM narratives, reducing response time by 60% vs. pure LLM approach while maintaining 99.9% uptime through multi-layer fallback architecture.

SayLess | *TypeScript, React, Tailwind, Clerk, Express.js, MongoDB, Gemini API, ElevenLabs, Deepgram* [github](#)

- Built an AI meeting assistant (Node.js, WebSockets, Recall.ai) that joins live meetings, transcribes speech via Deepgram, and auto-generates Gemini-powered summaries + action items 5x faster than manual note-taking.
- Engineered a real-time voice pipeline integrating ElevenLabs TTS with customizable voices, enabling the assistant to actively participate in conversations with natural, low-latency responses.

SKILLS

Languages: Python, Java, TypeScript/JavaScript, SQL, C, C++, HTML/CSS, Bash

Frameworks: React, Next.js, Node.js, Express.js, FastAPI, Flask, Tailwind CSS

Tools & Infrastructure: PostgreSQL, MongoDB, Docker, Git, Linux, AWS, GCP

Data/ML: Pandas, NumPy, Scikit-Learn, TensorFlow, XGBoost, Keras, Matplotlib
